LOS ANGELES SECTION
STRATEGIC PLAN
2009
Approved 10/7/09**

INTRODUCTION

The Los Angeles Section (Section) of the American Society of Civil Engineers (Society) is comprised of approximately 8000 civil engineers, civil engineering students, and affiliate members. The Section is organized into seven Branches, five Younger Member Forums, one Life Member Forum, seven Technical Groups, and eleven Student Organizations.

This Strategic Plan was prepared in order to focus on matters most important to the civil engineering profession and how our profession can best contribute to the people we serve.

SUMMARY

This Plan has five major goals:

1. Develop leadership to strengthen the Section, and to broaden our members' perspective
2. Promote member involvement in public policy decision making and in the finance of infrastructure at the national, state, and local levels
3. Develop pre-college student outreach programs throughout the Section
4. Promote the profession in our communities to enhance its stature through education of our members and the public concerning infrastructure needs and sustainable development
5. Advocate professional development through registration, Society and Section membership, and lifelong learning to aid our members continued growth throughout their careers

The top three goals address the critical organizational issues of LEADERSHIP, LEGISLATIVE INVOLVEMENT, and PRE-COLLEGE STUDENT OUTREACH that are essential for our profession to be a major contributor in the future of our cities and State.

The other two goals address the ongoing need to enhance our PROFESSIONAL STATUS and advocate PROFESSIONAL DEVELOPMENT.

The plan has identified two major challenges facing our State now and in the foreseeable future: INFRASTRUCTURE IMPROVEMENTS, especially water and transportation systems, and SUSTAINABLE DEVELOPMENT. The civil engineering profession needs to play a significant role in developing and carrying out short and long term solutions to these challenges.
