Concrete weir at Entradero Basin

Concrete weirs and biofiltration sumps allow stormwater retention, infiltration, and storage for irrigation.

Biofiltration sump constructed at Entradero Basin

Concrete weir and sumps at Henrietta basin

Flexible mat system at Entradero Basin

CITY OF TORRANCE Stormwater Basin and Treatment Wetlands Enhancement

In addition to eliminating erosion, the space between the flexible mat system allows infiltration and enables vegetation to grow and aesthetically enhance the area.

Flexible mat system installed at Entradero channel
