

LOOKING BEYOND WATERING REQUIREMENTS

OPTIMUM SPECIES SELECTION FOR PARKWAYS

With nearly 80% of California now in extreme drought conditions, there are growing calls for drought-tolerant landscaping on public property. However, focusing solely on watering requirements may overlook the numerous other functions served by vegetated parkways. Join AGENTS for a very timely **Popcorn Series** presentation by Cody Briggs on *Optimization Species Selection for Vegetative Filter Strips*. Mr. Briggs will highlight the experiments he performed for his Regenerative Studies Graduate Thesis and discuss alternative considerations when permitting and/or selecting plant species for use in the public right-of-way. *Bring your lunch and your friends - we'll bring the popcorn!*

**Wednesday, September 24, 2014 at 12:00 Public Works
Exec. Conf Room, 5th floor (behind the mural)
Los Angeles, CA 90015**

**Advance registration not necessary, but appreciated
RSVP with Cody Briggs at cbriggs@pacificaservices.com**
